Research to Classroom Project
 Division of Adolescent and School Health
 National Center for Chronic Disease Prevention & Health Promotion
 Centers for disease Control and Prevention

Consistent with CDC's practice of applying research findings to prevent disease and injuries, the Division of Adolescent and School Health (DASH) identifies curricula that have credible evidence of reducing health risk behaviors among youth. Once identified, CDC provides resources to ensure that the interventions, including training, are available nationwide for those interested in using them. CDC does not endorse curricula. Schools decide what curricula best meet their needs.

Further information about youth risk behaviors are available through the [DASH page](#).
