

Samples to Success

Sample items provide valuable insight into how students engage with different texts, tasks, and contexts, highlighting the types of opportunities they need for success in the classroom. These items offer a shared reference point for understanding proficiency expectations, complementing the assessment's role in measuring learning. By analyzing items alongside performance data, educators can gain a deeper understanding of students' strengths and areas for growth. Students thrive in environments rich with diverse materials, challenges that vary in task type, and multiple avenues for demonstrating understanding. High-quality instruction, aligned with the learning goals, is the most effective way to support students' growth and prepare them for success.

The items featured in this rubric are a mix of items representative of those found on the Illinois Assessment of Readiness (IAR) and items appropriate for classroom instruction to support and build the skills measured on the IAR. The distinction between a student scoring proficient and above proficient on the IAR is primarily determined by the total points earned on items that require modeling and/or reasoning. Students who can effectively explain and demonstrate their thinking are most likely to earn these points.

Expectation at Proficient: Interpret multiplicative comparisons as multiplication equations.	Complete the statement to represent the equation: $5 \times 3 = 15$. 5 times as many as <u>3</u> is 15.	Which equation correctly represents the statement "5 times as many as 3 is 15?" A. $15 \times 3 = 5$ B. $3 \times 5 = 15$ C. $5 + 3 = 15$ D. $5 + 5 + 3 = 15$	Which statements can be used to represent the equation $5 \times 3 = 15$? Select the two correct answers. A. The number 15 is 5 shared equally with 3. B. The number 15 is 5 more than 3. C. The number 15 is 5 times as many as 3. D. Joe is 15 years old. Cindy is 5 years old. Their ages can be divided by 3. E. Joe is 15 years old. Cindy is 5 years old. Joes is 3 times as old as Cindy. F. Joe is 15 years old. Cindy is 5 years old. Cindy is 3 years younger than Joe.	Create two different equations that represent the following situation: "Darius has 3 packages of trading cards. Each package contains 5 trading cards." Equations examples: $3 \times 5 = x$ $5 \times 3 = x$ How many trading cards does Darius have? Answer: 15

Measurement & Data

4.MD.2
Expectation at Proficient:
 Use the four operations to solve word problems and problems in real-world context involving distances, intervals of time (hr, min, sec), liquid volumes, masses of objects, and money, including decimals and problems involving fractions with like denominators, and problems that require expressing measurements given in a larger unit in terms of a smaller unit.

Below Proficient

Trevor had a piece of string that was 24 inches long. He cut off a 23.5-inch piece.

How long, in inches, is the remaining piece of string?

Answer: 0.5

Place a point on the number line to show the length, in inches, of the remaining string.

Answer: A point should be plotted on 0.5.

Approaching Proficient

Trevor had a piece of string that was 2 feet long. He cut off a 23.5-inch piece.

How long, in inches, was the original piece of string?

Answer: 24

How long, in inches, is the remaining piece of string?

Answer: 0.5

Place a point on the number line to show the length, in inches, of the remaining string.

Answer: A point should be plotted on 0.5.

Proficient

Trevor had a piece of string that was 2 feet long. He cut off a $22\frac{1}{4}$ -inch piece. Place a point on the number line to show the length, in inches, of the remaining string.

Answer: A point should be plotted above $1\frac{3}{4}$.

Above Proficient

Trevor had a piece of string that was $2\frac{1}{2}$ feet long. He cut off a $28\frac{3}{4}$ inch piece. Place a point on the number line to show the length, in inches, of the remaining string.

Explain your work.

Answer: A point should be plotted above $1\frac{1}{4}$.

The student response should include a thorough explanation of the work used to determine the answer.

Measurement & Data

4.MD.3

Expectation at Proficient:

Apply the area and perimeter formulas for rectangles in mathematical problems and problems in real-world contexts including problems with unknown side lengths.

Below Proficient

A rectangle is shown. The length of the rectangle is 3 meters. The width of the rectangle is 2 meters.

What is the area, in square meters, of the rectangle?

- A. 5
- B. 6
- C. 8
- D. 9

Approaching Proficient

The area of the rectangular sandbox at Dave's school is 108 square feet. The sandbox has a width of 9 feet as shown.

Sandbox

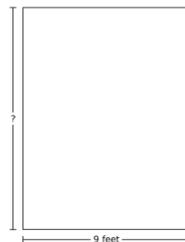

What is length, in feet, of the sandbox?

Answer: 12

Proficient

The area of the rectangular sandbox at Dave's school is 108 square feet. The sandbox has a width of 9 feet as shown.

Sandbox

What is the perimeter, in feet, of the sandbox?

Answer: 42

Above Proficient

A rectangle has an area of 24 square inches and a perimeter of 22 inches.

What is the length and the width, in inches, of the rectangle?

Answer: 8 x 3

Explain the difference between the area and perimeter formulas for rectangles.

The student response should include that the area formula for a rectangle (length \times width) calculates the total space inside the rectangle, while the perimeter formula ($2 \times$ length + $2 \times$ width) calculates the total distance around the rectangle.

Measurement & Data

4.MD.4

Expectation at Proficient:

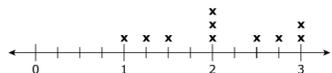

Make a line plot to display a data set of measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$).

Solve problems involving addition and subtraction of fractions by using information presented in line plots.

Below Proficient

Leonard measures the length of his used crayons. The lengths, in inches, of the crayons are shown on the line plot.

Crayon Lengths (inches)

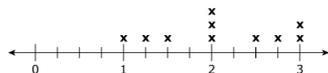

How many crayons measure 2 inches?

Answer: 3

Approaching Proficient

Leonard measures the length of his used crayons. The lengths, in inches, of the crayons are shown on the line plot.

Crayon Lengths (inches)

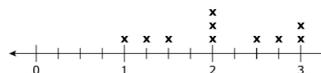

Three of the crayons are the same length. What is the length, in inches, of each of the three crayons?

Answer: 2

Proficient

Leonard measures the length of his used crayons. The lengths, in inches, of the crayons are shown on the line plot.

Crayon Lengths (inches)

Leonard lines the crayons up end-to-end.

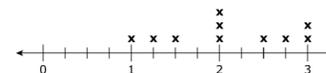

What is the total length, in inches of the line of crayons?

Answer: 21

Above Proficient

Leonard measures the length of his used crayons. The lengths, in inches, of the crayons are shown on the line plot.

Crayon Lengths (inches)

Leonard adds 4 more crayons to the line plot. The lengths, in inches, of the added crayons are $\frac{3}{4}$, $1\frac{1}{4}$, $1\frac{1}{2}$, $2\frac{3}{4}$. Update the line plot with the added crayons lengths.

The updated line plot should show the current X's as well as the additional 4 X's.

Measurement & Data

4.MD.5

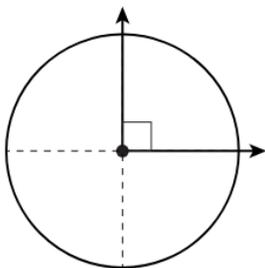

Expectation at Proficient:

Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement:

- a. Identify an angle is measured with reference to a circle with its center at the common endpoint of the rays.
- b. Identify an angle that turns through n one-degree angles is said to have an angle measure of n degrees.

Below Proficient

An angle is shown.

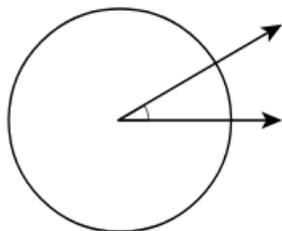

The angle turns through $\frac{90}{360}$ of the circle and makes up $\frac{1}{4}$ of the circle. Which value best represents the angle measure, in degrees?

- A. 1
- B. 4
- C. 90
- D. 360

Approaching Proficient

An angle is shown.

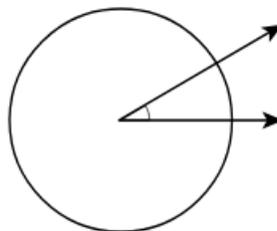

The angle turns through $\frac{30}{360}$ of the circle. Which value best represents the angle measure, in degrees?

- A. 1
- B. 30
- C. 180
- D. 360

Proficient

An angle is shown.

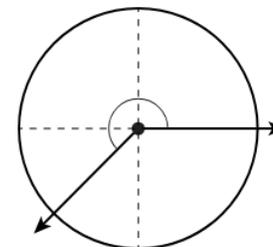

Which value best represents the angle measure, in degrees?

- A. 30
- B. 90
- C. 180
- D. 270

Above Proficient

An angle is shown.

The angle measures more than 180 degrees. What value best estimates the angle measure, in degrees?

Answer: 225

Explain how you determined your answer.

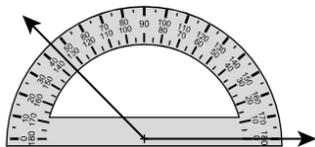

Answers may vary but should include an explanation of adding to 180.

Measurement & Data

4.MD.6
Expectation at Proficient:
 Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.

Below Proficient

A protractor is used to measure an angle, as shown.

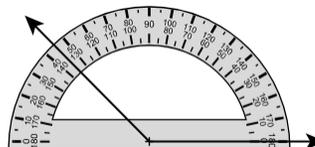

Which value represents the measure, in degrees, of the angle?

- A. 45
- B. 55
- C. 135**
- D. 145

Approaching Proficient

A protractor is used to measure an angle, as shown.

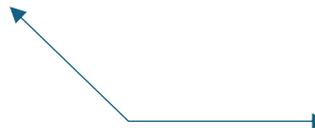

What is the measure, in degrees, of the angle?

Answer: 135

Proficient

An angle is shown. Use a protractor to measure the angle, in degrees.

What is the measure, in degrees, of the angle?

Answer range: 120 - 150

Above Proficient

Use a protractor to sketch an angle that measures 135 degrees.

Measurement & Data

4.MD.7

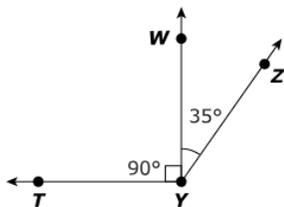

Expectation at Proficient:

Recognize angle measures as additive.

Solve addition and subtraction problems to find unknown angles on a diagram within mathematical problems as well as problems in real-world contexts.

Below Proficient

Some angles are shown.

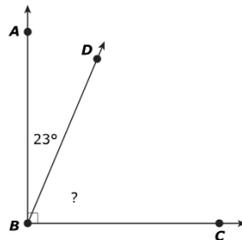

What is the measure, in degrees, of angle TYZ?

- A. 35
- B. 55
- C. 90

D. 125

Approaching Proficient

Some angles are shown.

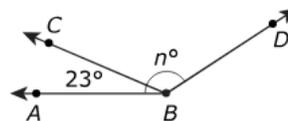

Angle ABC measures 90 degrees. What is the measure, in degrees, of angle DBC?

- A. 23
- B. 73**
- C. 90
- D. 113

Proficient

Some angles are shown.

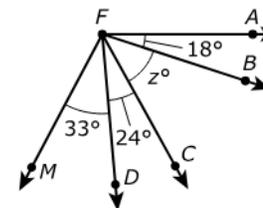

The measure of angle DBA, n , is 147°.

What is the measure, in degrees, of angle DBC?

Answer: 124

Above Proficient

Some angles are shown. The measure of angle AFM is 118°.

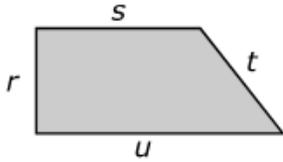

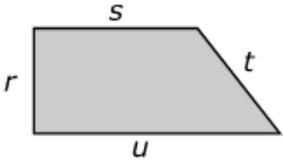

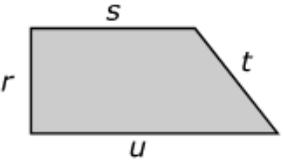

Determine the measure, z , in degrees, of angle BFC.

Answer: 43

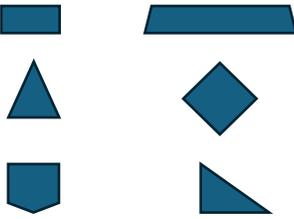

Write another question that can be determined by using either addition or subtraction of angles in the diagram shown.

Possible question: What is the measure, in degrees, of angle BFD? Answer: 76

Geometry

4.G.3
Expectation at Proficient:
 Recognize and draw a line of symmetry for a two-dimension figure as a line across the figure such that the figure can be folded along the line into matching parts.

Below Proficient

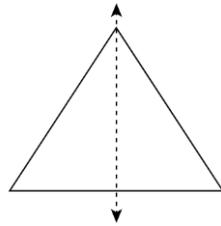

Does the figure show a line of symmetry? Yes or no.

Answer: yes

Approaching Proficient

The figure shows a line of symmetry.

Draw another line of symmetry.

The student should draw a line that intersect a vertex of the triangle and the midpoint of the opposite side.

Proficient

Which figure shows a line of symmetry?

- A.
- B.
- C.
- D.

Above Proficient

How many lines of symmetry does the figure shown have?

Answer: 6

Draw all the lines of symmetry.

The student should draw 3 lines of symmetry that pass through opposite vertices (diagonal symmetry) and 3 lines of symmetry that pass through the midpoints of opposite sides (reflective symmetry).
